

## Want to reduce your oven-cleaning costs by 30% or more?

Then discover the benefits of dry ice blasting from Cold Jet – the fast, easy and cost-effective way to clean, maintain and manage your ovens.

### **BENEFITS**

#### of Dry Ice Blast Cleaning

- Reduce production downtime
- Reduce overall cleaning time
- Eliminate product waste runs after cleaning
- Eliminate cool-down or significant heat-up time
- Eliminate the need to relubricate chains/bearings or pivot joints

Oven components are readily cleaned with the oven still at baking temperature.

Replace caustic cleaning in your oven with our low-cost and automated cleaning machine.

The liability involved in cleaning with wire bristles and caustics are eliminated with Cold Jet.

Removing carbon buildup, grease and other contaminants in your production ovens, without disassembly and while the ovens are hot, has never been easier. Cold Jet's FDA-approved technology blasts your oven plates with dry ice pellets that disintegrate and dissipate, leaving no secondary waste or residual blasting media to clean up or dispose of. Dry ice blasting is safe, non-abrasive and non-conductive.

Cold Jet's patented radial feed series blast systems enable wafer cookie dies to be cleaned on line, in the oven, and in a matter of seconds while the oven is at baking temperature. Cold Jet's patented dry ice pellets have the mass and density required to ensure thorough cleaning and are made with food-grade carbon dioxide. Ovens are back in production immediately after Cold Jetting, thus eliminating the rinsing, bearing regreasing and plate re-seasoning steps—realizing significant time and cost savings.
