delivering  
advanced  
**Dry Ice**  
solutions

## Want to reduce press cleaning time by as much as 400%?

Then try dry ice blasting from Cold Jet – the fast, easy and cost-effective way to clean, maintain and manage your production process.

### **BENEFITS**

#### of Dry Ice Blast Cleaning

- Eliminate the manual cleaning of presses, crowns, dryers and vents
- Reduce fire hazards
- Reduce labor costs and press downtime
- Increase employee safety, motivation and health

Clean press areas that previously could not be reached and reduce your fire hazard.

Operators are safer, cooler and more motivated using a Cold Jet machine over grinders.

Cold Jet nozzles have plenty of reach to access OSB press platens.

Producing quality products and minimizing the possibility of fire, means plywood and oriented strand board (OSB) presses need regular cleaning. Traditionally, multiple workers are involved in a very labor-intensive manual cleaning process using angle grinders during a regularly scheduled maintenance shift.

The cleaning process is dangerous and requires the cleaners to work within the machines in very close proximity to residues and residue dust. In addition, manual cleaning is not fully effective because the unreachable parts of the machine simply don't get cleaned.

Cold Jet's patented radial feed series blast systems clean four times faster than the traditional cleaning methods and are ultimately safer, and more cost effective. The patented dry ice pellets have the mass and density required to quickly and easily conduct a thorough cleaning.
